

PMP

Preventive Maintenance Program

THE PURPOSE

To help keep your company as productive and profitable as possible, Thiele Technologies introduces our **PMP** – Preventive Maintenance Program. PMPs offer flexible, multi-visit coverage options that take the hassle out of scheduling facility maintenance resources.

A comprehensive written inspection report is provided after each visit detailing the condition of the equipment. This report also includes inspections on critical areas of the equipment along with improvement recommendations to optimize machine performance.

THE VISITS

A trained Thiele Technologies technician performs preventive maintenance two to four times per year, depending on PMP level, on each piece of equipment.

During each visit, the field service technician will complete each item on the preventive maintenance inspection report, which includes an inspection for worn parts.

Training for your new employees or update training for longstanding employees can also be provided during a PMP visit.

THE DISCOUNT

The PMP parts and labor discount includes parts that are recommended during a PMP visit, as well as parts listed on the inspection report – provided the parts are ordered within 30 days of the PMP visit.

If for any reason you need to extend a PMP visit, you will receive the discounted labor rate originally quoted to you in the PMP contract.

THE SUPPORT

Thiele Technologies' main office is centrally located in Minneapolis, Minnesota. This allows us to dispatch technicians throughout the continental United States, typically with a maximum of one-half day travel time.

In addition, we also have technicians located across the country who are available to service the needs of specific product lines.

Contact the Thiele Technologies Service Department at **(612) 782-1200** or **(800) 932-3647** for additional information regarding a customized Preventive Maintenance Program designed just for you.
